

E2  
8. In a PC/TV computer system having keyboard for providing alphanumeric characters to said PC/TV computer and also having a display monitor, a method of selecting a network station comprising the steps of:

- storing by a manufacturer predetermined network station names;
- placing said PC/TV computer in one of a TV mode and a Computer mode;
- pressing a first alphanumeric key on said keyboard;
- creating a monitor display of the or each stored network station name containing a first character matching the character associated with said first alphanumeric key r;
- effecting user input to the system to mark the or a user selected displayed network station name; and
- then effecting user input to the system to tune to a network station corresponding to the displayed network station name marked by said user input.

E3  
10. The method of claim 8, wherein the or a user selected displayed network station name containing a matching first character is highlighted.

E4  
11. The method of claim 8, wherein said monitor display is effected in an active window of said display monitor when the system is in said Computer mode.

E5  
12. The method of claim 8, wherein the step of displaying is performed by providing a channel banner on the display monitor.

E6  
17. The method of claim 8, wherein said user input to tune to a network station is effected by actuation of a key on said keyboard.
